MPOB V3 CODEX MASTER WORKBOOK · MONTHLY DATA

The raw data you need, and who gets it

The workbook has 20 columns. Do not learn them one by one. Learn the three piles.

17
raw data columns
The other 2 you leave alone, and A is the calendar.

8
AI downloads for you
Public and free. One copy-paste job.

9
You ask MPOB for
One list. Send the first 3 now.

A B C D E F G H I J K L M N O P Q R S T

AI downloads · Ask MPOB, priority 1 · Priority 2 · Priority 3 · Leave alone · Calendar

AI downloads — 8 columns

- **B** Brent crude oil price — USD a barrel
- **C** Ringgit per US dollar — MYR per USD
- **D** Crude palm oil price — RM a tonne
- **G** Biodiesel export unit value — RM a tonne
- **K** CPO production — thousand tonnes
- **L** Palm oil exports — thousand tonnes
- **N** Biodiesel exports — thousand tonnes
- **P** Policy blend level — percent

Leave alone — 2 columns

- **J** Viability gap — RM a tonne
- **T** Biodiesel Stabilisation Fund balance — RM million

Ask MPOB — 9 columns

Priority 1 · send these first

- **H** MOPS Diesel price — RM or USD a tonne
- **I** PME (palm biodiesel) cost — RM a tonne
- **Q** National diesel consumption — million litres

Priority 2

- **E** Methanol price — RM a tonne
- **F** Crude glycerine price — RM a tonne
- **M** Biodiesel production — thousand tonnes
- **R** Biodiesel blended — million litres
- **S** Biodiesel subsidy paid — RM million

Priority 3

- **O** Biodiesel plant capacity — thousand tonnes a month

H · MOPS Diesel (simulated today) − **I · PME cost** (simulated today) = **J · Viability gap** (Python works it out) → **B20 or B30** (every answer rests on H and I)

Why MPOB is the bottleneck

A new month counts only when these seven columns are all filled. Otherwise the model drops it, with no warning.

B C D E F H I

AI can get B, C, D. Only MPOB can give E, F, H, I. On 6 Nov 2026 the public sites already had data up to October 2026, but the model stays at April 2026 until MPOB replies.

Workbook values are simulated placeholders, not official MPOB figures. Read from MPOB_V3_Codex_Master.xlsx (30f5c8d6af9d) · 6 Nov 2026 · workbook ends April 2026

EVERY VARIABLE

What each column is, and what it is today

	Variable	Unit	Today in the workbook	Who has the real data
Prices and costs				
B	**Brent crude oil price** The world oil price, monthly average.	USD a barrel	Real	U.S. EIA, free
C	**Ringgit per US dollar** Turns US dollar prices into ringgit.	MYR per USD	Real	Bank Negara via data.gov.my, free
D	**Crude palm oil price** Local delivered price of crude palm oil, monthly average.	RM a tonne	Real from 2012	MPOB statistics site, free
E	**Methanol price** A chemical used to turn palm oil into biodiesel.	RM a tonne	Old values, no source	Biodiesel plants, through MPOB
F	**Crude glycerine price** A by-product that plants sell. It lowers the cost of biodiesel.	RM a tonne	Old values, no source	Biodiesel plants, through MPOB
G	**Biodiesel export unit value** Export value divided by export tonnes. A public stand-in for a biodiesel price.	RM a tonne	Real, but a stand-in	MPOB statistics site, free
H	**MOPS Diesel price** The regional diesel benchmark price. Half of the viability gap.	RM or USD a tonne	Simulated	Platts under licence. Ask MPOB if it holds a copy.
I	**PME (palm biodiesel) cost** What palm biodiesel really costs to make. The other half of the viability gap.	RM a tonne	Simulated	MPOB, KPK or the biodiesel plants
J	**Viability gap** MOPS Diesel minus PME cost. Above zero, blending saves money.	RM a tonne	Calculated	Python works it out from H and I.
Volumes				
K	**CPO production** How much crude palm oil Malaysia produced in the month.	thousand tonnes	Real	MPOB statistics site, free
L	**Palm oil exports** Crude and processed palm oil sent abroad.	thousand tonnes	Real	MPOB statistics site, free
M	**Biodiesel production** How much biodiesel Malaysian plants made.	thousand tonnes	Old values, no source	MPOB. It is not in the public MPOB summary table.
N	**Biodiesel exports** Biodiesel sent abroad.	thousand tonnes	Real, 3 blank months	MPOB statistics site, free
O	**Biodiesel plant capacity** How much the licensed plants could make.	thousand tonnes a month	Old values, no source	MPOB licensing records
Policy and money				
P	**Policy blend level** The biodiesel blend in force: 0, 5, 7, 10 percent so far in the workbook.	percent	Policy record	KPK announcements. AI finds them, you confirm.
Q	**National diesel consumption** How much diesel Malaysia uses each month.	million litres	Old values, no source	Likely KPDN, MOF or the Energy Commission. MPOB or KPK can ask them.
R	**Biodiesel blended** How much biodiesel was really blended into diesel.	million litres	Old values, no source	KPK or MPOB
S	**Biodiesel subsidy paid** What the government really paid to support biodiesel.	RM million	Old values, no source	MOF or KPK. MPOB can ask.
T	**Biodiesel Stabilisation Fund balance** Money in the fund. The fund does not exist yet.	RM million	Blank on purpose	A future fund administrator.

MPOB-UKM RESEARCH PROJECT

Data request to MPOB

MPOB-UKM Endowment Chair Research Grant 2026, Topic 3: Developing a Sustainable Self-Funding Framework for Malaysia's National Biodiesel Mandate

- **Period:** monthly, January 2010 to the latest month
- **Format:** a spreadsheet with one row per month
- **Source:** please name the source of each series
- **Limits:** please say if a series is licensed or restricted, and whether it may be shown in a public app or only used in the model
- **If MPOB does not hold it:** please tell us which agency does

Priority 1 · the three that matter most

1	**Monthly average MOPS Gasoil (diesel) price, the grade used in Malaysia's diesel price mechanism (10 ppm, Euro 5; please confirm the grade)**	RM or USD a tonne	Half of the viability gap that decides between B20 and B30. The project uses a simulated series until this arrives.
2	**Monthly PME (palm biodiesel) cost, or the domestic price paid to producers. If possible, also how it splits into processing, blending, logistics and margin**	RM a tonne	The other half of the viability gap. The project uses a simulated series until this arrives.
3	**Monthly national diesel sales or consumption**	million litres	Sets the biodiesel volume behind the fund calculations.

Priority 2 · these sharpen or check the results

4	**Monthly methanol price paid by Malaysian biodiesel plants**	RM a tonne	An input to the biodiesel cost model.
5	**Monthly crude glycerine price received by Malaysian biodiesel plants**	RM a tonne	An input to the biodiesel cost model.
6	**Monthly palm biodiesel production**	thousand tonnes	Checks whether supply could cover B30.
7	**Actual monthly biodiesel volumes blended or delivered**	million litres	Checks the project's volume figures against actual deliveries.
8	**Actual monthly biodiesel subsidy disbursements**	RM million	Checks the fund's support figures against actual payments.

Priority 3 · small gaps, low urgency

9	**Installed or licensed biodiesel capacity, with a plant list and start dates**	thousand tonnes a month	Shows whether B30 fits within plant capacity.
10	**Monthly CPO prices for 2010 and 2011**	as published	The project has only yearly averages for these 24 months.
11	**Biodiesel export tonnes and value for October 2010, December 2010 and January 2011**	as published	The public MPOB table is blank for these three months.
12	**Start dates and coverage of regional B15 and B20**	as published	The project records one national level, and the rollout is by region.
13	**Taxable fresh fruit bunch tonnes a month, Peninsular and Sabah/Sarawak**	as published	Used only for the windfall profit levy baseline reference.
